## SERIES 39

Miniature Limit

## FEATURES

- Adjustable Location Setting
- Plunger Sealed Version

DIMENSIONS in inches (and millimeters)

## CIRCUITRY

## SPECIFICATIONS

## Rating Criteria

Contact Resistance: 25 milliohms maximum on a new switch
Voltage Breakdown: 1,000 Vac between mutually insulated parts
Insulation Resistance: 1,000 megohms minimum
Operating Temperature: $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$

## Materials and Finishes

Bushing and Mounting Nuts: Brass, tin zinc Insulation Sleeve: Molded polyester for 39-101, 39-102, 39-103 and 39-701: phenolic per MIL-M-14 type CFG for 39-702
Base: Thermoset plastic
Terminals: Commercial bronze, gold plated over nickel for 39-101, 39-102, 39-103 and 39-701; silver for 39-702
Springs: Tinned music wire
Contacts: Commercial bronze, gold-plated for 39-101, 39-102, 39-103 and 39-701; fine silver for 39-702
Button: Thermoplastic
O-Ring: (39-701 \& 39-702) Silicone

## STANDARD OPTIONS

Optional plating: gold-plated contacts for dry circuit conditions, contact Grayhill.

## ORDERING INFORMATION

| $39-102$ | SPST, N.O. With Extended Overtravel |
| $39-103$ | SPST, N.O. With Extended Overtravel |
| $39-701$ | SPST, N.O. With Overtravel, Sealed |
| $39-702$ | SPST, N.C. Sealed |

## RECOMMENDED PANEL CUTOUT

## Pushbutton Engineering Information

Pushbutton switches are selected not only by their ratings, but also by their contact type. While nearly all rotary switches and DIP switches have wiping contacts, pushbutton switches may have either wiping or butt contacts (see internal views below).

Wiping Contacts are self-cleaning and usually provide a low resistance in circuits where contact resistance is critical. However, the wiping action creates mechanical wear and conductive wear products.

Butt Contacts have less wear than wiping contacts and therefore, have a longer life. They are also smaller. Butt contacts are not self-cleaning, so their contact resistance can vary from operation to operation.

Snap Action switches are basically butt contact switches with a spring mechanism which provides the make and break. The mechanism controls both the operating point and the rate of operation, but adds to the wear of
the switch. The rapid rate of make and break means that these switches are appropriate for high current loads. They usually have a slight wiping action and contact surfaces made of precious metals to minimize their disadvantages.

## Internal Views of Pushbutton Switches

## Switch Terminology

Actuator: The part of the switch to which an external force is applied to operate the switch.

Alternate Action (Push-Push) Switch: A switch in which the operable position is maintained after the first actuation, and then disengaged with the second operation.

Break-Before-Make Switch (BBM): A double throw switch in which the moving contact breaks the connection with the first circuit before
making contact with the second; also called non-shorting switch.

Double Throw Switch: A switch which has a normally open as well as a normally closed circuit per pole.

Joystick Action Switch: (From Joystick, the control for an airplane). A lever switch which operates with momentary action in 4 directions, and is disengaged in the upright position.

Make-Before-Break Switch (MBB): A double throw switch in which the contacts makes connection with the second circuit before breaking contact with the first; also called shorting switch.

Maintained Contact Switch: A switch in which the actuator remains in a position until it is actuated to another position where it also remains until actuated. Example: Push-Pull Switch.

Momentary Contact Switch: A switch in which the shorting bar returns from its operated position to its normal or free position when the actuating force is removed.

Operating Position or Point: The position of the actuator when the desired electrical action (make or break of contact) occurs.
N.C., Normally Closed: Switch in which the circuit is closed without actuation (with actuator in the "normal" position).
N.O., Normally Open: Switch in which the circuit is open without actuation (with actuator in the "normal" position).

Overtravel: The distance or angle between the operating position and the extreme position to which the actuator may be moved.

Pole: An electrically isolated circuit within a switch; a common terminal and all the selected terminals to which it connects.

Pretravel: The distance or angle through which the actuator moves from its free position to its electrical operating position.

Single Throw Switch: A switch which has only one normally open or one normally closed circuit per pole.

Throw: See Single Throw and Double Throw.

## Snap Action Contact

| SPST | N.O. or N.C. | 1,3 | 25,000 | $7 / 8(22,23)$ | SPST, 1 and 3 Amp | $4000 / 10$ |
| :--- | :--- | :---: | :---: | :---: | :--- | :---: |
| SPDT | BBM | 5,10 | 25,000 | $7 / 8(22,23)$ | Audible Click | $2000 / 7$ |

* BBM is Break-Before-Make (Non-Shorting). MBB is Make-Before-Break (Shorting).
** Rated for 28 Vdc and/or $5 \mathrm{Vdc}(.150 \mathrm{~A})$ and $20 \mathrm{Vdc}(.020 \mathrm{~A})$.
*** Maximum width behind panel or above PC board rounded to next highest 1⁄16" (1,59 mm).

## SEALED TERMINAL AND WIRE LEAD OPTIONS

## FEATURES

-1/4, ½, and 1 Amp

- Limit, Overtravel, or Panel Seal
- Butt or Wiping Contact
- Normally Open or Normally Closed
- Momentary or Push/Pull
- Series 23, 30, 39 and 46

## SPECIFICATIONS

## Rating Criteria

Make and Break Current Rating: See page for standard part number
Contact Resistance: 25 milliohms maximum on a new switch. Less than 4 milliohms per inch of wire for wire lead option styles. Insulation Resistance: 1,000 megohms minimum between mutually insulated parts Voltage Breakdown: 1,000 Vac minimum between mutually insulated parts

## Materials and Finishes

Potting Sleeve (Series 39): Thermoset Plastic Wire Leads: \#26AWG, (.99mm diameter) insulated Teflon, Copper stranded wire, per MIL-W-16878,Type E. Ends are stripped 0.250 " (6.35) and solder dipped. For other specifications, see Page References.

Option -E Epoxy-Sealed Terminals

Option -EW,
Potted Base \& 6" Wire Leads

*Epoxy potting sleeve enlarges the diameter of the -EW style to $0.300(7,62)$.
**Sealed terminal (-E) option is not necessary; terminals have sealed construction.
***Natural Color Button
$\dagger$ Adjustable from $1.214(30,84)$ to $1.334(33,88)$ dependent on button height, see switch pages.

## ORDERING INFORMATION

Use the Selector Charts at the beginning of the section to select a series. Use the pages listed there or referenced here to select a switch.

To order epoxy sealed terminals, add the suffix $E$ to the selected part number as allowed in the chart. Example: 30-1-E.
To order the epoxy-potted version with 6 -inch wire leads, use the suffix -EW as allowed in the chart. Example: 39-1-EW

Available From Your Local Grayhill Distributors. For prices and discounts, contact a local Sales Office, an authorized local Distributor or Grayhill.
