- 2. Hold-up Time measured at 90% Vout.
- 3. Please check the derating curve for more details.
- 4. Strongly recommend to conduct this test with DC Voltage. If customer wishes to test with AC Voltage, please disconnect all Y-Capacitors from Arch power supply.

(After 30 minutes of burn-in)

NOTE

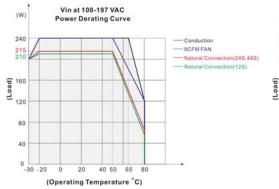

6. The size of the suggested aluminum plate is shown as below. And for optimizing thermal performance, the aluminum plate must have an even and smooth surface (or coated with thermal grease), and ARF240 series must be firmly mounted at the center of the aluminum plate.

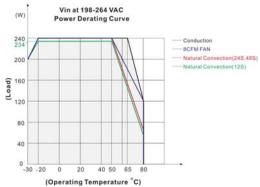

300 x 300 x 3.0 mm

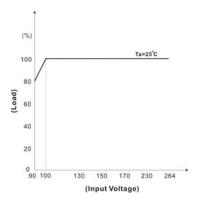

- 7. Please secure the power supply unit to your metal case by using the four screw holes in the corners for either Class I or Class II equipment
- 8. CAUTION: Double pole, neutral fusing. Disconnect mains before servicing. (ATTENTION: 2 poles avec fusible sur le neutre. Deconnecter le secteur avant intervention.)

DERATING

If input voltage is lower than 100VAC, please refer to the output derating V.S. input voltage curve for details
