

HLA50-255 S

- Lightning impulse current arresters type T1 ensure the equipotential bonding and eliminate the effects of lightning current in single-phase and three-phase power supply systems.
 - Products contain multiple non-exhausting spark gaps, thanks to which they are able to discharge the highest lightning impulse current.
 - Suitable for objects with considerable levels of protection LPL I and LPL II, such as big industrial complexes and properties of particular importance – hospitals, banks, power plants.
- Installed as close as possible the overhead line enters the building i.e. the electric power substation, electrometer or the main distribution boards.
 - If the product contains two PE (or PEN) terminals, it must not be used as a PE (PEN) bridge.
 - **LED** indication specifies a version with LED fault signalisation.
 - **S** indication specifies a version with remote monitoring and LED fault signalisation.
