

SCRJ-Transceiver 850nm 125MBit/s

1 General

The SCRJ Transceiver is designed to suit applications with 50/125µm graded index optical fiber. A fast 850nm LED with high optical power output and a high bandwidth optical receiver makes this transceiver a good choice for fiber optic systems using 50 or 62.5µm optical fiber. An I²C interface enables the control and management of the transceiver.

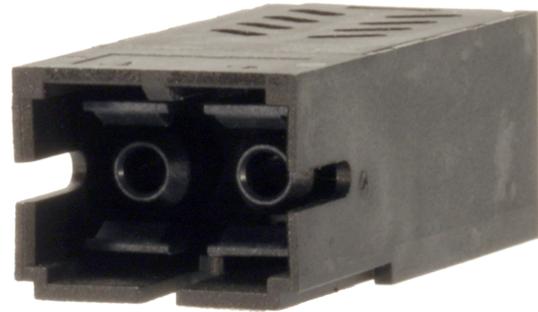

Fig. 1 SCRJ Transceiver

2 Application

Due to the max. data rate of 125MBit/s, the good optical properties and the easy optical fiber termination, the transceiver may be used in many applications:

- Optical networks
- Fast-Ethernet
- Industrial electronics
- Power electronics
- Consumer electronics

5 Features

- 850nm Wavelength
- -16dBm optical power output (50/125µm GI)
- -29dBm receiver sensitivity
- 125MBit/s
- +3.3V power supply
- PECL in-/outputs
- Signal Detect (SD) output
- I²C Management Interface
- Conductive plastic case
- suitable for 50/125µm and 62.5/125µm GI fiber

6 Maximum Ratings

Stresses beyond those listed under 'Maximum Ratings' may cause permanent damage to the device. Listed values are stress limits only and functional operation of the device at these conditions is not recommended. Exposure to maximum rating conditions for extended periods may affect the device reliability.

Parameter	Value	Unit
Operating temperature	-40...+80	°C
Storage temperature	-40...+100	°C
Solder temperature 2mm dist. to housing, t≤5s	260	°C
Power supply	1	V
Input voltage	-0.5..VCC	V
Differential input voltage	1.4	V
Output current	50	mA

7 Technical Data

Parameter	Value	Unit
Power supply	3.3	V
Transmitter current consumption	70	mA
Receiver current consumption	70	mA

9 Application hints

The transceiver is designed for applications using 50/125µm and 62.5/125µm multimode GI-fiber. Max. link length is 2000m. Best performance is achieved when using high quality connector assemblies.

10 External Circuitry

To receive an optimum performance of the transceiver a good power supply decoupling and signal line termination as shown in pic. 4 is mandatory. Place decoupling capacitors and termination resistors as close as possible to the inputs. Resistor values shown in table below.
